# HTML Assignment

Idea:

The aim of the assignment is to make a basic structure of your portfolio website using HTML. A portfolio website is one which tells about you, your skills, projects etc. (just like resume/CV, difference being that one can include images, effects etc. to make it more appealing).

Basic structure:

Points to be noted:

- Structure of the table for marks:

10th	12th	Graduation

- Use proper structure (divide your html file in header, section, div).
- Give appropriate class names and ids wherever necessary.
- The three images should be different and should come till the end of the browser width.
- The title of the webpage should be your name.
- Use meta tags to specify keywords, author etc.
